State of the Art Surgical Options for Women available in Johns Creek

One of the most exciting advancements of modern medicine is the use of minimally invasive surgical techniques. Drs. John and Ingrid Reyes of Modern Ob/Gyn of North Atlanta have dedicated their practice to this philosophy. "Minimally invasive surgery allows us to perform complex procedures through either small incisions or no incisions at all. Patients benefit by having less pain, shorter recovery times, and few or no scars. In office procedures also allow patients to avoid general anesthesia, hospital costs, and a stay in the hospital" says Dr. John Reyes.

The most advanced surgical technique with use of the daVinci robotic surgical system allows surgeons to perform hysterectomies and removal of fibroids through a few small incisions and patients can expect to be home the next morning and back to their usual activities within a couple weeks. Recently, Dr. Ingrid and John Reyes were the first surgeons to perform robotic surgery at Emory Johns Creek which has the most advanced daVinci system available.

Minimally invasive surgery also refers to in-office procedures which include treatment of heavy bleeding with endometrial ablation and incision-free permanent sterilization. "In office procedures are a safe and excellent option for many patients. It's great to be able to offer these procedures to women because they can get back to their lives so quickly, oftentimes even the same day. And typically, because these are seen as office visits, the cost to the patient is only their co-pay which makes such a big difference" says Dr. Ingrid Reyes.

Dr. John and Ingrid Reyes provide free monthly seminars to inform the community about these treatment options. "We both love to share this knowledge and experience with the community. It's best for patients to understand their options" says Dr. John Reyes.

Husband and wife team Dr. John Reyes and Dr. Ingrid Reyes of Modern Ob/Gyn are located at 6335 Hospital Parkway, Suite 204 in Johns Creek. To schedule an appointment or to register for an upcoming seminar, visit their website at www.reyesobgyn.com or call the office at 404-446-2496.

Audiology:

Continued from Page 25

hearing loss most commonly report difficulty in understanding speech.

Conductive and mixed hearing loss, which are less common than sensorineural hearing loss, are related to damage or malformation of the outer and/or middle ear. These losses usually require medical attention. The specialized equipment and the trained professionals at a modern audiology clinic will discover any hearing deficiencies and recommend proper hearing instruments to compensate for any problems. Once a hearing device(s) has been chosen, testing will continue—this time to fine-tune the instrument to your individual deficiencies.

Maintenance

Hearing instruments are amazing devices, especially when you consider the environment they function in. Heat, moisture and foreign substances can accumulate and degrade performance, or even interrupt operation. Proper preventive care and maintenance go a long way toward ensuring trouble-free performance. This includes daily cleaning as well as regular examinations by your hearing professional. Be sure the audiologist you choose teaches you the proper way to keep your instrument maintained. A modern audiology clinic is always happy to inspect, make basic repairs, or even provide factory reconditioning for your instrument, if necessary. Many clinics offer attractive pricing through coupons or ads in the newspaper.

Take advantage, but remember: make your choice by professional service, not just by price.

Tips to Choose a Hearing Center

• Hearing loss can be devastating to life: It happens gradually over time for most people, slowly but surely causing more and more difficulty in being able to cope with life normally.

• Testing reveals the cause: A modern audiology clinic will have trained personnel and state-of-the-science technology to diagnose any hearing deficiency.

• Maintenance and the long term: Certified, trained personnel at a modern audiology clinic will teach you how to keep your instrument working at its best. If you have a problem, they will make repairs or have it factory reconditioned. A professional audiology clinic is in business to provide better hearing for people just like you.
